Security alert: Attack campaign involving stole OAuth user tokens issued to two third-party integrations

On April 12, GitHub Security began an investigation that uncovered evidence that an attacker abused stolen OAuth user tokens issued to two third-party OAuth integrations, Heroku and Travis-CI, to download data from dozens of organizations, including ours, in order to learn more about the impact to GitHub, npm, and our users.

Developer Leaks API Secrets & Private Keys, Cybercriminals Pounce

Researchers found that the private keys and secrets they discovered being exposed in the framework are already being used in the wild.

Toyota discloses data leak after access key exposed on GitHub

By Bill Toulas

October 10, 2022 01:50 PM 2

Toyota Motor Corporation is warning that customers' personal information may have been exposed after an access key was publicly available on GitHub for almost five years.

Supply Chain Could Endanger Business Information

It was Symantec analyzed contained valid access to private AWS cloud services.

Supply chain issues. An increase in the price of fuel and product availability are just some of the consequences of supply chain issues around the world. However, in the context of software and services, supply chain issues are very different. Mobile applications and services produced in the supply chain that can potentially lead to the exposure of sensitive data could be used by threat actors for other attacks.

Exposed by app developers, both knowingly and unknowingly, the security impacts putting not only the app users' data but also the company and employer's privacy and data at risk too.

We updated our RSA SSH host key

At approximately 05:00 UTC on March 24, out of an abundance of caution, we replaced our RSA SSH host key used to secure Git operations for GitHub.com.

APRIL 15TH, 2021

Bash Uploader Security Update

Update 4/29/2021 3PM PT: Through our investigation, we now have additional information concerning what environment variables may have been obtained without authorization and how they may have been used. Affected users can view details within the Codecov application.

Additionally, we have posted our most up-to-date set of IOCs below.

Note: If you are in the affected user group, at 6 am PT, Thursday, April 15th, we emailed your email address on file from GitHub / GitLab / Bitbucket and added a notification banner in the Codecov application after you log in.

Many integrations are defined in source code. Source code is in Github.
